

OFFER YOUR PATIENTS ONLINE CONSULTATIONS

virtuaden is a free system for practice owners to allow them to keep open a communication channel with their existing patients.

We're all aware of the current climate since COVID-19 and the very real impact it is having on the dental community, globally. As we move towards lockdown, dentists in Australia are currently working within Level 3 operational restrictions being told to only see emergencies, and practice without aerosols. How can we continue to communicate with your patients safely and effectively without the risk of unnecessary spread of COVID-19?

Dr Geeta Perks, Melbourne Dentist and Director of Dental Focus Marketing, has created an all-in-one online consultation system for dental practices. This allows dentists to be able to communicate safely by triaging their patients remotely from home.

These online consultations help the dentist to be there for their patients, making patients feel that they are cared for. Caring builds trust. Your patients will remember you if you were there for them at their time of need. Triageing reduces the risk of unnecessary spread of COVID-19.
